Working out volumes

Volumes are easy if you do a couple of simple things. Firstly, measure with a tape, do not step it out! Secondly measure everything in metres.

(e.g 300mm = 0.3m, 3" = 75mm = .075m)

Mulch or soil in a rectangular garden would be **garden width x garden length x the depth** of the soil or mulch. (e.g 1m x 10m x .1m = 1m³)

Mulch in a circular garden is a little different. You need to know the radius; that is the distance from the centre to the edge, or half the distance right across through the centre. Then it is the **radius x the radius x 3.14 x the depth**. (e.g. 2m x 2m = 4m², 4m² x 3.14 x .1m = 1.256m³. Say 1¼m³.)

When working out concrete blend add 30% to allow for slumpage.
